PROFESSIONAL SUMMARY

Backend-Focused Full Stack Developer with hands-on experience building REST APIs, authentication systems, database-driven applications and complete web projects using Node.js, Express.js, MongoDB and React. Focused on clean, modular architecture with strong emphasis on scalability, maintainability and secure, reliable API design.

BACKEND EXPERTISE

- **REST API Development** — clean routing, modular controllers and centralised error handling.
- **Authentication & Authorization** — JWT-based token security with protected routes.
- **Secure Password Handling** — bcrypt hashing for credential storage.
- **CRUD Operations** — complete create, read, update and delete application logic.
- **MongoDB & Mongoose** — schema design, relationships and efficient data modelling.
- **File Uploads** — Multer processing with Cloudinary cloud storage integration.
- **API Validation** — Joi schemas for reliable request and payload validation.
- **Middleware Architecture** — reusable layers for auth, logging and route protection.

SELECTED PROJECTS

Cartify — E-commerce Backend API ● IN DEVELOPMENT

E-commerce **backend and REST API** project currently in development, built with Node.js and Express.js. Implements **JWT authentication** with bcrypt password hashing, **Joi** request validation and **product management** with image uploads through Multer and Cloudinary, persisted via MongoDB and Mongoose. The API layer is the current focus of development; the frontend is not yet complete.
